

General Chemistry I (CHEM403) Fall 2016
Lecture - Fridays 9am- noon online (exams in person on campus)
Labs - in person on campus (syllabus distributed separately)

Instructor – Dr. Sarah Prescott (Dr. Prescott is preferred salutation)

Email – sarah.prescott@unh.edu

Office Hours – available by email and online via Zoom

Course Text – available freely online,

<http://cnx.org/contents/RTmulxzM@6.2:9H-cauk3@6/Preface>

Lab Required Materials- Lab coat, available at Work N' Gear, 1111 South Willow Street, Manchester, 626-9222

Safety goggles: Purchase your own or wear the lab's "community goggles"

Grading Distribution – You can access your lecture grades at any time via mycourses. Below is a percentage distribution of all components towards your final lecture course grade. Details on each component are included in this syllabus. Your lecture course grade comprises 80% of your total course grade; the lab component comprises the other 20%. Lab grades and syllabi will be distributed separately by your lab instructor.

Lecture Course Grade (80% of total)

Assignments	20%
Quizzes	20 %
Exams (2, 20% each)	40 %

UNH Grading Structure

A=93.0-100	C+=77.0-79.9
A-=90.0-92.9	C= 73.0-76.9
B+=87.0-89.9	C-=70.0-72.9
B=83.0-86.9	D+=65.0-69.9
B-=80.0-82.9	D=60.0-64.9
F=59.9 and below	

Course Format

Online Format: The format of this course is different from a traditional lecture format. Class participation and independent preparation are key requirements for doing well in this course. You are expected to log in for each class session having fully prepared on your own for class (see Class Study below). There will be no formal lecture in this course, although you will review recorded lectures as an important part of your learning experience. Class sessions will be devoted to discussion of the pre-class assignment problems and for addressing any additional student questions. No formal lecture is presented during class sessions. Sessions will vary in length and depend on amount of time needed to discuss questions.

Students that are most successful in this type of course are those that are motivated to learn, responsible, able and willing to learn independently. It is imperative that you set aside ample time for review, study, and practice with the material in this course. Chemistry requires excellent problem solving skills, and to acquire that you must practice!

It is the student's responsibility to have access to a reliable internet connection for this course. Computers on campus are available for your use in this course and support for them is provided.

General Assignment notes

o Assignments (except exams) are open notes, books, but you may not consult another person, either in written or electronic form. The HONOR code is in effect for completion of assignments. Should you discover a fellow classmate not adhering to this honor system, you are required to report the same. Violation of this code constitutes academic misconduct. All answers shall be in your own words. Copying from any source constitutes academic misconduct and will be treated according to UNH policy.

o There are **no makeups** – please take note on specific due dates for each item as described on the course schedule. **Late assignments will not receive credit.**

o You may (and are encouraged to) print out assignments for your sole use in reviewing material.

Course study

The following are steps you should follow in preparation and study in this course in order to have a successful course experience.

Before each class session

1. Read the text sections as assigned, taking care to work through problems as you read, and visiting animations and other links designed to aid in your learning. This should be an active study activity, with pencil, calculator and paper handy to work problems, take notes, and write down all questions.
2. Review the recorded lecture. This should be an active review, which includes solving the suggested problems. Write down questions you have.
3. Complete the pre-class assignment. Make note of problems that gave you difficulty or for which you have questions.

After each class session

4. Review all notes, all pre-class assignment problems, and complete any additional suggested problems.
5. Complete the Quiz. These will contain questions/problems similar to what will be asked on the final exam.

Following the above steps for every chapter should provide you with a successful and rewarding learning experience.

Description of Assignments

Assignments – 20%

- You are to complete a pre-class assignment prior to class sessions.
- Used to prepare you for the class discussion on the material from the chapter. If there are any questions you had difficulty with, make a note of them so that you can ask during the class session. It is expected that students will come to the class sessions with questions ready to ask.
- Grading will be done based on timely, full and thoughtful completion, not on accuracy.
- Everyone will have the same questions to complete, to allow us to discuss problems as a whole class.
- There are two assignments (About me video, Symposium summary) in addition to preclass assignments. Note due dates on all assignments.

Quizzes – 20%

- Should be completed following the lecture class on that relevant chapter.
- Due as described on schedule.
- Designed to keep you on track with your study and review of the material.
- Questions are selected randomly from a pool. Second attempt will have different questions from the first attempt.
- May be attempted twice. Your highest score (of two attempts) achieved by the due date will be automatically recorded in the gradebook. No credit for late assignments.
- The lowest quiz score will be dropped from your overall course grade for this component. The grade book is automatically setup to drop the lowest score. The grades are calculated as you proceed in the course, so your grade will fluctuate as you continue progress in the course.

Exams – 40%

- Summative evaluation of your understanding and application of key concepts.
- Two exams as listed on the schedule that you will take in person on campus. You have the entire class time to complete them. No other lecture activity is planned on exam days, but you will have lab as scheduled.
- You will need a scientific calculator.. You do not need a graphing calculator, just one that can perform exponents, scientific notation, and logarithm functions. You may not share calculators.
- You will be provided with a periodic table to use. A copy of this table is posted in the course.
- Questions will be similar to those from pre-class and quizzes.
- You may bring one sheet of paper (8 ½ x 11) with anything you like written on it. If any formulas are needed, you are expected to include these on your sheet. Sheets may not be copied or shared between students.
- Use of cell phones and other electronic devices during exams is prohibited.
- You may leave the exam room when complete, but may not exit/re-enter.
- Photo id must be presented when submitting completed exam to verify id.

Course Policies and Important Notes

Use of Technology: Mycourses will be used extensively in this course to facilitate efficient communication, post course documents and feedback. The Announcements section will be used to communicate all important course information. Use the messaging feature to ask any questions of the instructor.

Zoom (online conferencing tool accessed from within the course site) will be used for all weekly synchronous online class sessions. You will need to be able to hear (so ear buds if in a public location) as well as use your microphone (built in is fine). You will be asked to use the video feature during the first class session in order to introduce yourself to the class. You will also be asked to post a video introduction as an assignment outside of class sessions. Both these video elements are so that we can create a connected learning community in the course. You will want to be in a location that you can talk on occasion to contribute to discussion and ask questions. The text chat feature will also be used for this purpose. It is NOT recommended to use a mobile device for class sessions, as you will not be able to actively participate. A laptop or desktop are the best technology options for class sessions. More information on using the Zoom tool will be posted on the course site as well as an orientation to its use during the first class session.

Any instructor class cancellation or change notification will be done through an announcement on mycourses.

It is the student's responsibility to have access to a reliable Internet connection for this course. Computers on campus are available for your use in this course and support for them is provided.

You are encouraged to message me with questions, comments, or concerns at any time to me! You will find that feedback is timely and effective. I am online daily during business hours. Weekend availability will vary.

Student support: Students with physical, psychological, or learning disabilities who need classroom and/or testing accommodations must register with the Academic Counseling office. Accommodations will be made in accordance with university policy and procedure.

Cheating/Plagiarism: Copying of another's work is never permitted in this course. Cheating or plagiarism of any kind will result in course failure at the discretion of the instructor. Definitions of and procedures for dealing with academic misconduct will follow University policy.

Academic Honesty

The Biology Program at UNH Manchester will strictly adhere to the University policy on academic honesty, as published in the UNH Student Rights, Rules, and Responsibilities Handbook (<http://unh.edu/vpsas/handbook/academic-honesty>). By turning in any piece of work in this course, you declare that you have read and understand the policy, and that you did not engage in any form of academic dishonesty as defined in the Handbook.

Plagiarism can take many forms, such as: submitting someone else's work - in whole or in part - as your own; collaborating on answers for individual assignments, or allowing your own work to be used by another student; copying information from a web site or other text without proper documentation; buying a pre-written paper or lab report.

Cheating is mainly concerned with copying on exams or in lab, bringing crib notes into an exam or referring to notes or the textbook or any other source such as a programmable calculator, tablet, or cell phone during an exam. All electronic devices must be turned off and put away for the duration of the exam. Ear buds are not permitted.

Any instances of cheating or plagiarism will result in consequences that can range from a failing grade on the assignment for all students involved to dismissal from the University, as defined in the UNH Student Rights, Rules, and Responsibilities Handbook.

Should you have any questions regarding any of the above policies, it is your responsibility to contact me to discuss any concerns. This syllabus serves as a contract whereby you agree to all of the policies herein. This syllabus is subject to change at the discretion of the instructor.
